

1st ASRC TPI Kickoff meeting

Date: 13:30 ~ 17:30, 31 July

Location: 1st Center Meeting Room, 1st floor of
Advanced Science Research Center.

Speakers: Yutaka Utsuno, Mamoru Matsuo,
and Toshiki Maruyama

**Organized by the ASRC Theoretical Physics Institute (TPI), Advanced Science Research Center,
Japan Atomic Energy Agency (JAEA)**

TPI is a new organization in the ASRC, which aims to enhance cross-disciplinary communications across the hadron-nuclear and condensed matter groups at ASRC and establish collaborative associations both within ASRC and also with related research groups outside. In particular, we take advantage of the world first-rate J-PARC facility at JAEA and want to establish an on-site theory group that supports the J-PARC experimental projects. For these purposes, TPI will host visiting researchers, organize workshops and symposia of related topics with close collaborations with experimental physicists.

At this time, we organize the Kickoff meeting to start the communications among the groups. The seminars are organized and intended to give introductory talks for non-experts and everyone who is interested in the theory activities in the ASRC is welcome.

**Slides will be available (after the meeting) at
