

745th ASRC Seminar

Date: 13:30~ Mon., Feb 25

Location: 103 Meeting Room, ASRC Bldg.

Speaker: Dr. Kim Hyun-Chul
(Research Fellows / Inha University)

Title: My Research and Activities at the ASRC,
JAEA

Abstract:

Since my stay at the ASRC in Tokai is close to the end this year, I would like to summarize my research and activities at the ASRC with my deep gratitude to all the members of the ASRC. I wrote 8 papers and have been still preparing other two papers, while I was staying at the ASRC, about which I want to review briefly in this talk. There are still on-going projects with the colleagues at the ASRC, I will continue to work together with them in the future. I attended two times at the Reimei workshops and gave seminars there and also presented a review talk at Hadron Caffe. I also participated in the International Conference, QNP 2018, which was held in Tsukuba, last November. In January in this year, I visited Masa Harada's group in Nagoya, where I also talked about the heavy baryons in a pion mean-field approach. In addition to the physics, I have spent wonderful days, visiting several different places in Japan: Mito, Karuizawa, Tsukuba, Hitachi Naka, Aomori, and other beautiful places. Of course I also walked around in Tokai as a Tokai citizen. The selected photos will be presented together with physics in this talk. Again, I express my deep gratitude to all the members of the ASRC, especially, to Philipp Gubler, Emiko Hiyama, Atsushi Hosaka, Toshiki Maruyama, Hiroyuki Sako, Takayasu Sekihara, and Kiyoshi Tanida. I am very grateful to the director Makoto Oka for inviting me to the ASRC and for collaboration on hadrons in the strong magnetic fields. Last but not the least I owe many things to Ms. Kieko Iioka.
